#6991 PERFORMANCE TUNING CD

Over several years, Team Associated has been releasing tuning guides for those who wish to understand the tuning possibilities that Associated has built into its kits and RTRs. Normally, these guides were available in separate e-Book versions sold only through the Team Associated web site by direct download, payable by credit card. **This CD includes every tuning guide that was released in e-Book format.**

This CD version offers several benefits:

- + Protect your tuning guide purchase from a hard drive crash.
- + Purchase all tuning guides at once for a fair price.
- + No need to pay by credit card or have a long download wait, as in the case of e-Books.
- + Upon the release of a new e-Book, the CD-ROM will be upgraded to include the new guide. Simply order the new CD (including a photocopy of your present CD as proof of ownership) for a low upgrade cost.

These guides are exactly the same as the e-Book versions and feature the same quality of photos and illustrations. These guides offer over 40 tuning options and over 60 photos and drawings to set up your car to win. Their pages cover the basic kit configurations without aftermarket parts and tires.
